

Wilson Vale
Net Zero business operations
in 2021

Produced 11,695 tCO₂e in 2021

86t were within scope 1 and 2
(directly controlled by Wilson Vale's own activities)

Proud to say with emissions being less than 1% of our total output in 2021, we have been able to purchase carbon credits for the balance supporting two carbon reducing initiatives in Brazil and Zimbabwe.

We are delighted to report we are now Carbon Neutral for our Scope 1 and 2 company emissions, while we continue to work hard to reduce our Scope 3 impact.

Wilson Vale
activities in 2022
and beyond

At head office level we are still striving to reduce our 80t direct activity based emissions by:

Producing and purchasing 100% Green Energy to power our Head Office

At least 50% of our company car fleet to be fully electric by the end of 2023

And all vehicles to be fully electric by the end of 2024

Amending the geographical area that Operations Managers cover, to reduce annual mileage by 25% from baseline by 2024 and by at least 50% by 2030.
